

NEXTAUTH_URL Fix - Deployment Instructions

What I've Completed

I've successfully fixed the NEXTAUTH_URL issue in your code and pushed it to GitHub. Here's what was done:

1. Problem Identified

- **Issue:** NEXTAUTH_URL secret in Google Secret Manager is empty
- **Impact:** Logout redirects fail with 404 error
- **Root Cause:** NextAuth.js can't construct proper redirect URLs without NEXTAUTH_URL

2. Solution Implemented

- **Modified:** `cloudbuild.yaml`
- **Changed:** NEXTAUTH_URL from Secret Manager reference → Direct environment variable
- **Value:** `https://crtlpyme-ean57to77a-uc.a.run.app`
- **Committed:** Commit `c495938` to `main` branch
- **Pushed:** Successfully to GitHub

3. Approaches Tried

-  **Approach 1:** Update Secret Manager directly → Failed (permission denied)
-  **Approach 2:** Update Cloud Run service via API → Failed (permission denied)
-  **Approach 3:** Update via GitHub → **SUCCESS**

What You Need to Do

The code fix is ready in GitHub, but **the deployment hasn't been applied yet** to the running Cloud Run service.

Current Status: Service is still using the empty Secret Manager reference.

You need to: Trigger a deployment to apply the fix.

How to Deploy (Choose ONE method)

Method 1: GCP Console (Recommended - 5 minutes)

This is the easiest and fastest method:

1. Open Cloud Run Console:

`https://console.cloud.google.com/run/detail/us-central1/crtlpyme?project=crtlpyme-477300`

2. Click the blue **"EDIT & DEPLOY NEW REVISION"** button at the top

3. **Scroll down** to the **“Variables y secretos”** (Variables and Secrets) section
 4. **Find NEXTAUTH_URL** in the list:
 - It should show as a “Secret reference”
 - Click the  button to remove it
 5. **Click** the **“+ ADD VARIABLE”** button
 6. **Enter:**
 - **Name:** NEXTAUTH_URL
 - **Value:** https://ctrlpyme-ean57to77a-uc.a.run.app
 7. **Scroll to bottom** and click **“DEPLOY”**
 8. **Wait** 5-10 minutes for deployment to complete
 9. **Verify** the fix (see verification steps below)
-

Method 2: Check for Automatic Build

Before doing manual deployment, check if Cloud Build is already building automatically:

1. **Open Cloud Build Console:**

<https://console.cloud.google.com/cloud-build/builds?project=ctrlpyme-477300>
 2. **Look for a build** that started recently (after the commit)
 3. **If you see a build running:**
 -  Great! Wait for it to complete (10-15 minutes)
 -  Skip to verification steps below
 4. **If NO build is running:**
 -  No automatic trigger configured
 - → Use Method 1 or Method 3
-

Method 3: gcloud CLI (If you have gcloud)

If you have gcloud installed and authenticated:

```
# Authenticate (if needed)
gcloud auth login

# Set project
gcloud config set project ctrlpyme-477300

# Update the service
gcloud run services update ctrlpyme \
  --region=us-central1 \
  --update-env-vars=NEXTAUTH_URL=https://ctrlpyme-ean57to77a-uc.a.run.app \
  --remove-secrets=NEXTAUTH_URL

# Wait for deployment to complete
```

✓ How to Verify the Fix

After deployment completes:

1. Test Logout Functionality

1. **Visit:** <https://crtlpyme-ean57to77a-uc.a.run.app>
2. **Log in** with your credentials
3. **Click** “Cerrar Sesión” (Logout)
4. **Expected:** ✓ Redirects to landing page (/)
5. **Previous behavior:** ✗ 404 error

2. Check Service Configuration

Visit Cloud Run console and verify new revision is deployed:

```
https://console.cloud.google.com/run/detail/us-central1/crtlpyme?project=crtlpyme-477300
```

Look for:

- ✓ New revision number
- ✓ “Serving traffic” status
- ✓ No errors in logs

3. Verify Environment Variable (Optional)

If you have gcloud:

```
gcloud run services describe crtlpyme \
  --region=us-central1 \
  --format="value(spec.template.spec.containers[0].env)" | grep NEXTAUTH_URL
```

Should show: NEXTAUTH_URL=https://crtlpyme-ean57to77a-uc.a.run.app

What Changed

Before (Old Configuration)

```
# cloudbuild.yaml
- '--set-secrets=NEXTAUTH_URL=NEXTAUTH_URL:latest' # Empty secret
```

Result: NextAuth.js couldn't get NEXTAUTH_URL → Logout failed → 404 error

After (New Configuration)

```
# cloudbuild.yaml
- '--set-env-vars=NEXTAUTH_URL=https://crtlpyme-ean57to77a-uc.a.run.app' # Direct value
```

Result: NextAuth.js has correct NEXTAUTH_URL → Logout works → Redirects to landing page

Troubleshooting

If deployment fails:

1. **Check Cloud Build logs:**

<https://console.cloud.google.com/cloud-build/builds?project=crtlpyme-477300>

2. **Check Cloud Run logs:**

<https://console.cloud.google.com/run/detail/us-central1/crtlpyme/logs?project=crtlpyme-477300>

If logout still doesn't work:

1. **Clear browser cache** and cookies
2. **Check browser console** for errors (F12)
3. **Verify NEXTAUTH_URL** is set correctly in Cloud Run
4. **Check application logs** for NextAuth.js errors

Summary

Task	Status
Problem identified	✓ Complete
Code fix created	✓ Complete
Code pushed to GitHub	✓ Complete
Deployment	 PENDING - YOUR ACTION REQUIRED
Verification	 After deployment

Quick Action Checklist

- ☐ Choose deployment method (Method 1 recommended)
- ☐ Trigger deployment
- ☐ Wait 5-15 minutes for completion
- ☐ Test logout functionality
- ☐ Verify redirect works correctly
- ☐ Confirm no 404 errors
