

CRTLPyme - Interface Audit Report

Date: November 8, 2025

Executive Summary

This audit identifies critical navigation issues, broken links, duplicate pages, and missing functionality that need to be addressed to ensure a smooth user experience across the CRTLPyme platform.

Critical Issues

1. Broken Navigation Link - Registration Page

Location: Landing page (`app/page.tsx:209`)

Issue: Link points to `/auth/signup` but actual registration page is at `/auth/register`

Impact: High - Users cannot register from the main CTA button

Fix: Update link from `/auth/signup` to `/auth/register`

```
// Current (BROKEN):
<Link href="/auth/signup">
  <Button size="lg" className="text-lg px-12">
    Comenzar Ahora - Es Gratis
  </Button>
</Link>

// Should be:
<Link href="/auth/register">
  <Button size="lg" className="text-lg px-12">
    Comenzar Ahora - Es Gratis
  </Button>
</Link>
```

2. Duplicate SaaS Admin Panels

Location: Two separate admin panels exist

- `/admin-saas` - Has tenants, plans, stats, master-products
- `/saas-admin` - Has subscriptions, plans, revenue

Issue: Confusing navigation, duplicate functionality

Impact: High - Users with PROVEEDOR role don't know which panel to use

Current State:

- Login redirects to `/saas-admin`
- Most functionality seems to be in `/admin-saas`
- Both have "Plans" pages with potentially different implementations

Recommendation: Consolidate into single admin panel at `/admin-saas`

Pages to merge:

- /admin-saas (keep this as main)
 - Move /saas-admin/subscriptions → /admin-saas/subscriptions
 - Move /saas-admin/revenue → /admin-saas/revenue
 - Ensure /admin-saas/plans has all functionality from both
 - Delete /saas-admin directory after migration
-

3. Login Redirect Inconsistency

Location: app/auth/login/page.tsx:56**Issue:** Redirects PROVEEDOR role to /saas-admin but should redirect to /admin-saas**Impact:** Medium - Users land on less featured admin panel**Fix:** Update redirect target

```
// Current:
if (session?.user?.role === 'PROVEEDOR') {
  router.push('/saas-admin')
}

// Should be:
if (session?.user?.role === 'PROVEEDOR') {
  router.push('/admin-saas')
}
```

Medium Priority Issues

4. Missing Legal Pages

Location: Referenced in app/demo/page.tsx**Issue:** Links to /terms and /privacy pages that don't exist**Impact:** Medium - Legal compliance issue, broken links in footer**Pages to create:**

- app/terms/page.tsx - Terms of Service
 - app/privacy/page.tsx - Privacy Policy
-

5. Provider Products Page Location

Location: app/provider/products/page.tsx**Issue:** Exists in /provider but should probably be in /admin-saas**Impact:** Low-Medium - Inconsistent routing structure**Recommendation:**

- Move to /admin-saas/products for consistency
 - Or ensure proper navigation exists to /provider/products
-

Mobile Responsiveness Concerns

Areas Requiring Mobile Testing:

1. **Landing Page Hero Section** - Test on phone viewport
2. **Pricing Plans Grid** - Should collapse to single column on mobile
3. **Admin Navigation** - Mobile menu implemented but needs testing
4. **Forms** - Registration, login, onboarding forms on mobile
5. **Data Tables** - Admin panels with tables need horizontal scrolling

Responsive Classes to Verify:

```
// Current responsive patterns used:  
- md:grid-cols-2 lg:grid-cols-3  
- sm:flex-row  
- hidden md:block  
- md:hidden (mobile menu)
```

Action Required: Deploy to staging and test on actual mobile devices

Working Features (No Issues Found)

Authentication Flow

- Login page works correctly
- Registration form validation working
- Session management functional

Navigation Components

- AdminNavBar - Desktop and mobile menu implemented
- /admin layout - Proper authentication checks
- /admin-saas layout - Proper role checking

Public Pages

- Landing page structure is good
 - PricingPlans component fetches from API correctly
 - Demo page form validation working
 - Onboarding wizard flow is complete
-

Recommendations for Fixes

Phase 1: Critical Fixes (Immediate)

1. Fix /auth/signup → /auth/register link
2. Update login redirect to /admin-saas
3. Create Terms and Privacy pages

Phase 2: Consolidation (Next)

1. Merge `/saas-admin` functionality into `/admin-saas`
2. Update all navigation references
3. Remove duplicate code
4. Test all PROVEEDOR workflows

Phase 3: Mobile Optimization (Final)

1. Test all pages on mobile viewport
2. Fix any layout issues
3. Optimize table displays for mobile
4. Add horizontal scroll where needed

Testing Checklist

Navigation Flows to Test:

- ☐ Landing page → Registration
- ☐ Landing page → Login
- ☐ Landing page → Demo
- ☐ Landing page → Onboarding
- ☐ Landing page → Plans selection
- ☐ Login (PROVEEDOR) → Admin panel
- ☐ Login (ADMIN) → Dashboard
- ☐ Admin panel navigation (all roles)
- ☐ Mobile menu functionality
- ☐ Logout from all panels

CRUD Operations to Test:

- ☐ Plans management (PROVEEDOR)
- ☐ Tenants management (PROVEEDOR)
- ☐ Products inventory (ADMIN)
- ☐ Sales operations (CAJERO)
- ☐ Reports viewing (ADMIN)

Mobile Responsiveness to Test:

- ☐ Landing page (iPhone 12)
 - ☐ Landing page (Samsung Galaxy)
 - ☐ Login/Register forms
 - ☐ Admin dashboard
 - ☐ POS interface
 - ☐ Data tables
-

Console Errors to Check

- Run the following to check for errors:
1. Open browser console on each page
 2. Look for 404 errors on missing routes
 3. Check for API call failures
 4. Verify no broken image/asset links
 5. Check for TypeScript errors in build

Impact Analysis

Issue	Severity	User Impact	Fix Complexity
Broken registration link	Critical	Blocks new signups	Easy (5 min)
Duplicate admin panels	High	Confusion	Medium (2 hours)
Login redirect wrong	High	Wrong landing page	Easy (5 min)
Missing legal pages	Medium	Broken links	Easy (30 min)
Mobile responsive	Medium	UX issues	Medium (varies)

Next Steps

1. **Immediate:** Fix all critical issues (broken links)
2. **Short-term:** Consolidate admin panels
3. **Medium-term:** Complete mobile testing
4. **Long-term:** Implement analytics to track navigation patterns

Notes

- Project deployed at: <https://crtlpyme-app-399088129827.us-central1.run.app>
- GitHub repo: Must have proper branch for testing
- All fixes should be tested locally before deployment
- Consider adding E2E tests for critical navigation flows
